

iServer Consultancy Services

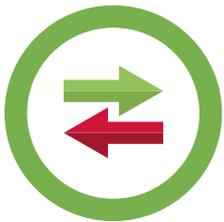

Orbus consultants deliver projects across the globe, spanning multiple industries. We offer a number of consultancy services tailored to customer needs, whether it's helping to get a business transformation off the ground, or assisting with the reporting and visualization outputs of mature programs.

Advisory and Strategy

Extract maximum value from your iServer investment with best-practice advice and implementation guidance. In enterprise architecture, whether you're adopting a new use-case, facing configuration issues, or implementing a new framework and reference model, strategy is king. Define and plan your business transformation by leveraging the extensive knowledge and first-hand experience of Orbus consultants.

Content Conversion, Migration and Integration

Importing data, establishing integrations and migrating to new tools are all project that present unique challenges, but you can overcome these hurdles with the support of our consultants. The Orbus services team offer assistance on projects, including converting and migrating inputs establishing ongoing integrations, metamodel mapping and data advisory, configuration changes, content conversion (diagrams or raw data), imports, and application connector development.

Implementation and Configuration

Tailor iServer configuration to support your organization's needs and objectives. Whether it's for a new implementation, a specific project, or as a consequence of changing requirements, you can leverage support for the entire iServer application and all additional modules developed by Orbus Software.

Reporting and Visualization

Go beyond out-of-box analysis capabilities; create custom reporting and dashboards across business intelligence platforms. If you need a set of bespoke, compelling user-friendly dashboards in Power BI that address a complex governance challenge.

Viewpoint Alignment and Development

Creating the right outcomes is crucial to both your enterprise architecture project and your iServer investment. If you want to implement a new modeling aesthetic, create advanced data-driven roadmaps, or simply ensure the diagrams you create in iServer tell the right story, our consultants can offer support. Leveraging deep Visio development expertise with a breadth of framework knowledge and experience, they'll work with you to deliver the right solution.

Training Courses

Our consulting team are more than just product experts. Our experience stretches across many common industry standards and use-cases, and we bring unique insights into how these may be applied practically. To help your team bridge the gap between theory and application, we provide a number of practical “hands-on” workshops.

BPMN in a Tool: From Theory to Practice

BPMN in a Tool: From Theory to Practice will give you all the necessary skills to apply BPMN 2 in real life situations. This course from Orbus Software goes beyond a typical theoretical approach; it involves a hands-on interpretation and application of BPMN, within the context of an enterprise architecture tool – iServer.

TOGAF in a Tool: From Theory to Practice

TOGAF in a Tool: From Theory to Practice will give you all the necessary skills to apply TOGAF in real life situations. TOGAF is the foremost enterprise architecture framework, and this course, from Orbus Software, goes beyond a typical theoretical approach. It involves a hands-on interpretation and application of TOGAF, within the context of an enterprise architecture tool – iServer.

Implementing ArchiMate in iServer

Implementing ArchiMate in iServer provides a “quick-start” full day workshop, allowing users to quickly connect ArchiMate theory and training with practical modeling in iServer. Ultimately, the course is designed to ensure you’re comfortable implementing the ArchiMate standard in iServer.

Implementing Roadmaps in iServer

The Implementing Roadmaps in iServer course provides man overview of iServer and its use in creating architectural roadmaps for the various enterprise architecture domains. You will learn how to overcome current enterprise architecture roadblocks and obstacles, ensuring that the organization can move forward with its transformational initiatives.

Strategic Portfolio Management

This one-day course provides an overview of Orbus Software’s Strategic Portfolio Management Solution, and its use in addressing five common scenarios. It will provide you with the foundational knowledge required to understand the purpose of strategic portfolio management (SPM), and how it fits with iServer, related modules and Microsoft Power BI.
